

Battery warranty guide

For the better

What's covered under battery warranty?

RAC provides a nationwide warranty from the date of purchase*:

- » 3 years on all premium and Hi-Tec batteries for private use vehicles
- » 2 years on all extra heavy duty batteries for private use vehicles
- » 1 year on all batteries fitting into commercial vehicles
- » 6 months on all batteries fitted into courier vehicles
- » 3 months on all batteries fitted into taxis
- » Up to 2 years on all deep cycle batteries
- » 5 years on all battery chargers

The warranty is honoured by affiliated automobile clubs throughout Australia on presentation of a sales receipt for the RAC battery product.

Consumer guarantee

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage.

You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Warranty against defects

In addition to the rights you have under the Australian Consumer Law (Consumer Guarantees), if you have purchased a battery or battery product and it is found to be defective in material or workmanship (and not merely discharged/ flat) during the warranty period, the battery will be replaced free of charge.

What is covered under warranty

Whilst RAC Batteries come with a nationwide warranty, there are events where the warranty will be void if it doesn't meet our warranty eligibility criteria.

Covered

- Manufacturer failure

Examples;

- » Has a leaking battery case which is not associated with impact damage or external friction
- » Internal failure of the battery

- When the battery is significantly different from the sample or description

Not Covered

- Flat battery due to being left discharged over extended time
- Flat battery due to limited driving or long periods of no driving
- Battery sulphation - which is a result of not keeping a battery correctly charged
- Battery drained due to features being left on, such as headlights, dashcams, accessories, ignition and interior lights
- Faulty alternator or charging system
- Incorrect fitment, broken container or cover, damage caused by fire, excessive heat, wreckage, explosion, freezing, neglect or the use of special additives introduced to the battery
- Damage caused by abuse or modification
- If you knew about faults to your vehicle that may affect the battery prior to purchasing the battery
- If you purchased the battery despite advice that it may not meet your needs
- If you change your mind. If you have purchased the wrong battery you may exchange it only provided it has not been fitted to your vehicle and is still in the condition it was originally sold in
- The Warranty is not transferable or assignable to a third party when vehicle is sold

Necessary precautions to prevent any damage to your vehicle are taken during the course of any work being carried out. As modern vehicle computers can be corrupted, an Electrical System Memory Protector (ESMP) is used to ensure retention of vehicle computer memories. The provision of a sound system PIN code is the responsibility of the driver or vehicle owner. RAC will not meet any expense in PIN code recovery. Responsibility for damage caused that is not related to the battery fitment cannot be accepted.

Note: This is not intended to be an exhaustive list.

Battery testing

RAC will ensure the battery is diagnosed by using a battery test device. These test results will support our team determining the battery reliability and power.

Battery Test Results	
Test Result	Description
Good battery	Your battery is measuring within the manufacturer's specification for Cold Cranking Amps or 'CCA'. Your battery should reliably start the vehicle.
Good battery recharge	The battery test result has determined that your battery is in good condition, but the voltage or battery capacity is low and requires charging using a battery charger. Charging can take up to 48 hours.
Suggested battery replacement	The battery is no longer at full capacity but may still start the vehicle. If the battery is not charged on a battery charger there is an increased likelihood of a breakdown due to battery failure. If charging is not an option, we highly recommend replacing your battery before it fails.
Bad battery replace	This reading indicates a failure in at least one or more of the cells inside the battery. Your battery needs to be replaced.

Factors that may cause a battery to go flat or discharge, include (not limited to):

- » Incorrect / faulty alternator not supplying enough power to the battery
- » Accessories or electrical fault discharging the battery
- » Vehicles not used for extended periods of time or infrequent use
- » Keys left in the ignition overnight and vehicle not going into sleep mode
- » Doors or boot being left ajar and interior lights left on
- » Vehicle not locked when not in use.

If your battery has been diagnosed as discharged/flat, it is important to return your battery back to a full state of charge to avoid permanent damage. Modern vehicle electrical systems are not designed to recharge a flat battery, but only to replenish the charge that was lost when the vehicle is started.

You will need to charge your battery using a suitable battery charger to return your battery to full charge. Failure to do so may result in premature failure of the battery.

RAC reserves the right to test any battery that's presented for a warranty claim and will not accept any third party testing results.

Getting the most out of your battery

Keeping your battery fully charged and in tip-top shape will help prolong its life and save you money in the long run. Here's how:

Turn your accessories off

Ensure all lights and accessories are turned off when the vehicle is not running as they will drain your battery.

Lock your vehicle

Not fully locking your vehicle might drain your battery.

Drive your car regularly

Leaving your vehicle stationary for a long period or only driving short distances will affect your battery's charge.

Maintain your vehicle and battery

Have your vehicle serviced regularly. Ask your service provider to check you battery is secure (vibration can cause damage to battery) and to inspect battery terminals (loose and/or dirty terminals can prevent the battery from charging fully).

How to make a warranty claim

To make a warranty claim for an RAC battery or battery charger:

- » Call us on 13 11 11.
- » You may need to take your vehicle or defective battery or charger to an approved Service Centre.
- » Provide your proof of purchase (e.g.: tax invoice).
 - > A warranty claim will not be honoured unless you provide proof of purchase.
 - > If proof of purchase cannot be verified, we can assist with the supply of a new battery for purchase, and you will have 14 days in which to contact us with proof of purchase of the defective battery. Once provided, we can arrange a refund.
- » As part of the Consumer Guarantees, we are responsible for any reasonably foreseeable expenses you incur as a result of a major fault with the goods.
- » If you are not an RAC Roadside Assistance member at the time the warranty claim is made, a service fee may be charged if roadside assistance is provided (other than in relation to your RAC purchased battery).

If you are outside of WA, contact our affiliates Australia wide:

- » NSW and ACT - NRMA
- » Victoria - RACV
- » Tasmania - RACT
- » South Australia - RAA
- » Queensland - RACQ
- » Northern Territory - AANT
